## DETAILED ACTION

1. In an amendment dated, September 15, 2010, Claims 1 and 8 have been amended. Currently claims 1, 4- 8 and 10- 12 are presented for examination.

### ***Response to Amendment***

2. Applicant's amendment filed September 15, 2010, with respect to Claim 1 and 8 has been fully considered and is persuasive. The rejection of Claims 1, 4- 8 and 10- 12 has been withdrawn.

### ***Examiner's Statement of Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose the claimed invention. **The features of independent claim 1 and 8** directed towards allowable subject matter is "...a jetting unit that includes a nozzles and that is configured to control a jet amount or a jet direction of gas or liquid jetted from the nozzles; and a jet control unit configured to control the jet amount or the jet direction of the gas or the liquid according to a position or an orientation of a receiver that is configured to receive a pressure by the gas or the liquid jetted from the jetting unit so as to provide force feedback to an operator wherein, the position or the orientation of the receiver is measured by a receiver measurement unit, the nozzles are arranged in equilateral triangles in the jetting unit, and when the receiver has a

Art Unit: 2629

*concave shape of a diameter  $D$ , intervals for placing each of the nozzles in the jetting unit are set such that at least one nozzle exists within a region having a diameter of  $0.8 \times D$  to exert an even pressure on the receiver at nozzle transitions, the receiver is separated from a surface on which the nozzles that form the equilateral triangles are arranged and the gas or the liquid is jetted towards the receiver from the nozzles that form the equilateral triangles ...". Suzuki et al. (JP Publication No. 2001-022499) discloses a jetting unit that includes a nozzles (fig 1b item 2) and that is configured to control a jet amount or a jet direction of gas or liquid jetted from the nozzles (Paragraph 16 and 17); a jet control unit (fig 2 item 10) configured to control the jet amount or the jet direction of the gas or the liquid according to a position or an orientation of a receiver that is configured to receive a pressure by the gas or the liquid jetted from the jetting unit so as to provide force feedback to an operator (Paragraph 5), wherein, the position or the orientation of the receiver is measured by a receiver measurement unit (Paragraph 5, line 4-5) and the receiver has a concave shape (Par 12), the receiver is separated from a surface where the nozzle is located (fig 1b wherein the receiver 5 is not connected to the unit where the nozzle is located) the gas or the liquid is jetted towards the receiver from the nozzles [(Fig 2 item 2, air blasting discharge) discloses air is discharged toward the blast receiving unit (5) from air blasting discharging nozzles (2)]. Further more Satoshi et al (JP Publication No. 2004/157677) discloses that the nozzles in the jetting units are positioned in a triangular shape. But Suzuki et al. or Satoshi et al fails to disclose intervals for placing each of the nozzles in the jetting unit are set such that at least one nozzle exists within a region having a **diameter of  $0.8 \times$***

Art Unit: 2629

**D** to exert an even pressure on the receiver at nozzle transitions. These features in combination with the remaining language of claim 1 and 8 are not taught by the prior art of record. Therefore claims 1, 3-8 and 10-12 are found to be allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
